PROFILE

GenAI Engineer | Software Developer (AI/Backend) | Python Developer with 2+ years of experience building scalable AI applications, intelligent automation platforms, and backend systems using Python. Skilled in FastAPI, LLM integration, Retrieval-Augmented Generation (RAG), AI workflow orchestration, and microservices architecture. Experienced in developing production-grade solutions that automate enterprise workflows, improve operational efficiency, and enable intelligent decision-making. Passionate about building scalable AI systems, distributed architectures, and automation-first products that deliver real-world impact.

EXPERIENCE

Software Engineer (GenAI | Python | AI/Backend) | GlobalLogic India

March 2024 – Present

- GenAI GL Use Case Project | Sep 2025 – Present

- Engineered AI-powered chatbots to automate internal workflows (travel documents, visa letters, IT service tickets), reducing manual effort by 60–70% and improving turnaround time.
- Developed and deployed scalable backend services using FastAPI, enabling seamless integration with email systems and enterprise tools for end-to-end automation.
- Built and optimized Retrieval-Augmented Generation (RAG) pipelines using chunking, embeddings, and vector databases; applied prompt engineering and context management to improve LLM response accuracy by ~30%.
- Designed robust data pipelines and databases, implementing logging, monitoring, and workflow automation (n8n), enhancing system reliability and increasing team productivity by 40%.

- HHAeXchange | Jul 2024 – Aug 2025

- Designed and developed 15+ REST and SOAP APIs using FastAPI and .NET (C#) for secure data exchange between healthcare systems, ensuring high availability (>99.9%) and compliance
- Utilized Swagger and Postman for API documentation, testing, and validation, improving integration efficiency and reducing debugging time by 30%.
- Managed CI/CD pipelines and deployment lifecycle, reducing release cycle time by 30% and ensuring zero critical production issues during deployments.

Web Developer Intern | Simran Software Solutions Pvt. Ltd.

Jul 2023 – Dec 2023

- Developed responsive and user-friendly frontend interfaces using JavaScript, HTML5, and CSS3.
- Improved frontend implementation quality through structured UI development and hands-on project contributions.

Python Developer Intern | Pennsummit Tubular Engineering Pvt. Ltd.

Jan 2023 – Jun 2023

- Contributed to ERP backend development by building 7 backend modules and workflow automation logic.
- Improved operational efficiency by 25% through automation, reporting enhancements, and backend process optimization.

SKILLS

- Programming:** Python, JavaScript, C# (.NET – basic exposure)
- Frameworks & Technologies:** FastAPI, REST APIs, SOAP APIs, Microservices Architecture, WebSockets, Kafka, Redis
- AI / Machine Learning / GenAI:** LLM Integration, RAG, AI Agents, Prompt Engineering, Text Chunking & Context Management, AI Workflow Automation, Vector Databases & Embeddings, AI Chatbot Development, Pandas, NumPy, Scikit-learn, Matplotlib
- Databases:** PostgreSQL, MySQL, SQL Server, MongoDB, Redis
- Cloud & DevOps:** AWS (Basics), Docker, CI/CD Pipelines (Git-based workflows)
- Tools & Platforms:** Git, Swagger, Postman, n8n, Ollama

PROJECTS

SentinelAI — Real-Time Incident Intelligence & Observability Platform

GitHub: github.com/Anubhav2808GIT/sentinel-ai

- Built a production-style AI-powered observability platform using event-driven microservices architecture.
- Developed telemetry ingestion, anomaly detection, and incident correlation workflows using scalable backend systems.
- Designed distributed processing pipelines with real-time monitoring and observability capabilities.
- Tech Stack: Python, FastAPI, Kafka, Redis, Docker, PostgreSQL, WebSockets

Cvantra-AI — Resume Intelligence & GenAI Analysis Platform

GitHub: github.com/Anubhav2808GIT/CVantra_AI

- Developed an end-to-end GenAI platform for Resume ↔ Job Description analysis using local LLMs via Ollama.
- Implemented AI-powered match scoring, gap analysis, recruiter-style evaluations, interview question generation, and persistent reporting dashboards.
- Built interactive analytics dashboards with charts and local AI processing workflows.
- Tech Stack: FastAPI, React, TypeScript, TailwindCSS, SQLite, Ollama, Python

AI Job Hunter Assistant — Intelligent Workflow Automation System

GitHub: github.com/Anubhav2808GIT/ai-job-hunter-assistant

- Built an AI-powered automation workflow for job discovery, fit scoring, cover letter generation, and instant alerts.
- Integrated AI scoring pipelines, Telegram notifications, Google Sheets automation, and intelligent workflow orchestration using n8n.
- Designed scalable automation pipelines combining APIs, SQL logic, local LLMs, and workflow orchestration systems.
- Tech Stack: n8n, Ollama, Python, HTTP APIs, Telegram Bot, Google Sheets

ACHIEVEMENTS

• Spot Award – GlobalLogic (2024)

Exceptional contributions to the HHAeXchange project, including successful API development and deployment, resolving 80+ production issues, and consistently performing well in a fast-paced, client-focused environment.

EDUCATION

B.Tech in Computer Science Engineering

Manav Rachna International Institute of Research and Studies

CGPA: 7.73 | Aug, 2019 - Jun, 2023

CERTIFICATIONS

- AI Accelerator Program – Be10x (Ongoing)
- Machine Learning – Internshala (2021)
- Python Programming for Everybody – Coursera (2023)
- HTML, CSS, and JavaScript – Coursera (2021)
- Introduction to Cloud – IBM (2021)
