PROFILE

AI Engineer & Backend Developer with 2+ years of experience building scalable GenAI applications and Python-based backend systems. Expertise in FastAPI, LLM integration, and Retrieval-Augmented Generation (RAG) for intelligent automation. Strong background in system design, API development, and microservices, with proven impact in improving system efficiency and response accuracy in production environments.

EXPERIENCE

Software Engineer (AI/Backend | Python | GenAI) | GlobalLogic (March 2024 – Present)

GenAI GL Use Case Project (Internal) | Sep 2025 – Present

- Engineered AI-powered chatbots to automate internal workflows (travel documents, visa letters, IT service tickets), reducing manual effort by 60–70% and improving turnaround time.
- Developed and deployed scalable backend services using FastAPI, enabling seamless integration with email systems and enterprise tools for end-to-end automation.
- Built and optimized Retrieval-Augmented Generation (RAG) pipelines using chunking, embeddings, and vector databases; applied prompt engineering and context management to improve LLM response accuracy by ~30%.
- Designed robust data pipelines and databases, implementing logging, monitoring, and workflow automation (n8n), enhancing system reliability and increasing team productivity by 40%.

HHaEXchange (Client Project) | Jul 2024 – Aug 2025

- Designed and developed 15+ REST and SOAP APIs using FastAPI and .NET (C#) for secure data exchange between healthcare systems, ensuring high availability (>99.9%) and compliance.
- Utilized Swagger and Postman for API documentation, testing, and validation, improving integration efficiency and reducing debugging time by 30%.
- Managed CI/CD pipelines and deployment lifecycle, reducing release cycle time by 30% and ensuring zero critical production issues during deployments.

Web Developer Intern | Simran Software Solutions Pvt. Ltd. (Jul 2023 – Dec 2023)

- Developed responsive and user-friendly interfaces using JavaScript, HTML5, and CSS3, while enhancing frontend development skills through hands-on projects and structured training programs.

Python Developer Intern | Pennsummit Tubular Engineering Pvt. Ltd. (Jan 2023 – Jun 2023)

- Contributed to ERP system development by building 7 backend modules and business logic to automate workflows, improve system efficiency, and enhance reporting, leading to a 25% increase in operational efficiency.

SKILLS

- Programming:** Python, JavaScript, C# (.NET – basic exposure)
- Frameworks & Technologies:** FastAPI, REST APIs, Microservices Architecture
- AI / Machine Learning / GenAI:** LLM Integration, RAG, Text Chunking & Context Management, AI Workflow Automation, Vector Databases & Embeddings, AI Chatbot Development, Pandas, NumPy, Scikit-learn, Matplotlib
- Databases:** PostgreSQL, MySQL, SQL Server, MongoDB, Redis
- Cloud & DevOps:** AWS (Basics), Docker, CI/CD Pipelines (Git-based workflows)
- Tools & Platforms:** Git, Swagger, Postman, n8n

EDUCATION

B.Tech CSE | Manav Rachna International Institute of Research and Studies | CGPA: 7.73 | (Aug, 2019 - Jun, 2023)

ACHIEVEMENTS

Spot Award – GlobalLogic (2024)

Exceptional contributions to the HHaEXchange project, including successful API development and deployment, resolving 80+ production issues, and consistently performing well in a fast-paced, client-focused environment.

PROJECTS

AI-Powered Workflow Automation Chatbot

- Built GenAI chatbot using LLMs, FastAPI, and RAG for enterprise workflow automation.
- Improved response accuracy by ~30% using embeddings and prompt engineering.

RAG-Based Knowledge Retrieval System

- Developed semantic search system using vector database and text chunking.
- Enabled context-aware query responses over large datasets.

Scalable API Service with Authentication

- Developed high-performance REST APIs using FastAPI with JWT authentication and role-based access control.
- Optimized database queries to reduce latency and improve API performance under concurrent load.
